

## Water for our Future

All treated water must be disinfected before it's discharged back into the environment. The City of Lafayette

applies an environmentally friendly process that utilizes ultraviolet light to safely return water into our streams and protects local ecosystems.

Watch this video to learn how UV light is making positive financial and environmental impacts on Lafayette water at [lafayetteco.gov/UVtreatment](http://lafayetteco.gov/UVtreatment).

## Building Code update project

The City is considering ways to strengthen locally-adopted building codes to support the community's climate and

resilience goals. The new requirements would prepare new buildings for future solar installations, reducing reliance on natural gas through all-electric construction, meeting the growing

demand for electric vehicle charging, and more.

Learn about these efforts at drop-in virtual meetings in early February and March and join the conversation at [lafayetteco.gov/BuildingCodeUpdate](http://lafayetteco.gov/BuildingCodeUpdate).

## Work where you live!

Please check the City calendar for updates. For info about these and other events, visit [lafayetteco.gov/Events](http://lafayetteco.gov/Events).

Unlike your backyard compost pile, your compost cart can accept raw meat, leftover bones, and dairy items. All items placed into your compost cart are processed at a local facility and in 4 months, nutrient-rich soil is available for use.
